

## **Introduction**

Polycarboxylate superplasticizer is a new generation of environmental protection superplasticizer independently developed by our company. The comparison with similar products at home and abroad shows that polycarboxylate superplasticizer has reached the international advanced level in terms of technical performance index and cost performance. It is set to reduce water, cave-in, strengthen, anti-shrinkage and environmental protection equal to a series of excellent performance of water reducer, can completely solve the high strength, high performance concrete viscosity, construction performance is not good weakness, is used for the preparation of high strength, high performance concrete ideal admixture. Can be mixed with a variety of admixture compound into multifunctional admixture, such as pumping agent, early strength agent, anti-seepage waterproof agent, retarder and so on.

## **Main product performance**

1, low content, high water reduction rate

2, early strength high strength, early strength increased by more than 50%, 28-day strength increased by more than 30%, especially suitable for high content fly ash concrete.

3. Good working performance of concrete: even in the case of high slump, the concrete prepared with polycarboxylic acid superplasticizer will not have obvious segregation and bleeding, and the appearance color of concrete is consistent.

4. The concrete mixed with this product has good durability, which is better than ordinary water reducer in terms of filling, stability, pumpability, strength and compactness, resistance to sulfate corrosion, alkali-aggregate reactivity, frost resistance, shrinkage resistance and creep.

5. It has good compatibility with different kinds of cement and admixture, which solves the problem of compatibility between other water-reducing agents and cementitious materials.

6. Good stability: no precipitation at low temperature.

7. Green environmental protection products, the content of alkali, chloride ion, sodium sulfate and formaldehyde are very low, and the production process does not produce pollution to the natural environment, in line with the ISO14000 national standards for

environmental protection management, conducive to sustainable development.

8. Good economic benefits: the comprehensive engineering cost is lower than that of other types of products.
